

# DAISY — Delivery Automation Intelligence System Yield

Multi-Stage Enterprise Delivery Orchestration Platform

OVERVIEW

Designed a multi-stage enterprise delivery orchestration platform providing execution continuity, SLA visibility, release coordination, and operational scalability across distributed teams — consolidating fragmented handoffs, manual follow-ups, and disconnected reporting into a single governed pipeline.

OPERATIONAL SCALE

Supported **55+ users across India and the US** across Sales, QA, Build, Delivery, and Leadership. Managed a full **7-stage enterprise delivery lifecycle**. Scaled operations **from 40 FTEs to 3 FTEs**.

BUSINESS IMPACT

75%

Reduction in manual repetitive activities

43%

Improvement in execution quality

40→3

FTE scale-down through automation

55+

Users across India & US

CHALLENGES SOLVED

- Fragmented onboarding & delivery handoffs
- Repeated manual coordination & follow-ups
- SLA inconsistencies & reporting delays
- Limited delivery visibility & release readiness

KEY CAPABILITIES

■ Delivery Orchestration

Centralised 7-stage pipeline managing the full lifecycle from Sales handover to completion.

■ AI Workflow Automation

AI-assisted stage execution, recommendations, and auto-advance logic reducing manual intervention.

■ SLA-Aware Tracking

Real-time SLA monitoring with breach alerts, escalation routing, and release-readiness scoring.

■ Executive Dashboards

Role-filtered reporting for leadership, delivery, and QC teams with KPI visibility and exports.

■ Human-in-the-Loop

Configurable approval gates at key pipeline stages for governance and compliance control.

■ Quality & Defect Governance

Automated QA validation, defect lifecycle tracking, and checklist enforcement across releases.
