

AutonOps

AI-Assisted Enterprise Delivery Operations Platform

OVERVIEW

Designed an AI-assisted enterprise delivery modernisation platform providing centralised execution visibility, assignment intelligence, operational governance, and delivery coordination across distributed teams — replacing fragmented spreadsheets, manual tracking, and disconnected Jira workflows with a single governed operations hub.

OPERATIONAL SCALE

Supported **31+ users across India** spanning Delivery, QC, PMO, Engineering, and Leadership teams through a centralised governance layer.

BUSINESS IMPACT

75%

Manual coordination reduced

\$29,230

Annual cost saving

~1,500

Defects prevented per month

168 hrs

Operational hours saved monthly

CHALLENGES SOLVED

■ Fragmented tracking across spreadsheets, emails & Jira tickets

■ Limited delivery visibility and SLA monitoring

■ Manual governance and operational follow-ups

■ Inconsistent assignment decisions and reporting delays

KEY CAPABILITIES

■ AI Assignment Intelligence

Context-aware recommendations for task and resource assignment across delivery teams.

■ Execution Dashboards

Centralised real-time visibility into delivery progress, team workload, and stage status.

■ SLA & Delivery Tracking

Automated SLA monitoring with breach alerts and escalation routing.

■ Governance & Checklists

Structured approval workflows, checklist enforcement, and compliance tracking.

■ Operational Reporting

Scheduled analytics, KPI summaries, and export-ready reports for leadership.

■ Cross-Team Coordination

Unified coordination layer across Delivery, QC, PMO, Engineering & Leadership.
